SUMMARY

Computer Science graduate and Junior Penetration Tester with hands-on experience in web application, API, and security configuration assessments. Experienced in testing authentication and authorization mechanisms, analyzing application behavior, identifying and validating security vulnerabilities, and producing technical security reports. Completed extensive practical training through PortSwigger Web Security Academy and TryHackMe, with a current focus on web application and offensive security.

EXPERIENCE

Junior Penetration Tester Independent / Contract Security Assessment Work 2026 – Present

- Conducted authorized security assessments of web applications, APIs, and externally exposed assets across multiple security assessment engagements.
- Performed testing of authentication, authorization, session handling, API functionality, security configurations, and common web application vulnerabilities.
- Identified and validated security weaknesses including Cross-Site Scripting (XSS), JWT-related vulnerabilities, clickjacking, security misconfigurations, and firewall configuration issues.
- Performed external configuration assessments covering HTTP security headers, TLS/HTTP security controls, DNS exposure, and other externally observable security configurations.
- Analyzed application requests, responses, authentication flows, and security controls using Burp Suite and other security testing and reconnaissance tools.
- Authored 6 technical security assessment reports documenting findings, evidence, impact, and remediation recommendations, and reviewed 2 additional reports prepared by another team member.
- Conducted security investigations of publicly accessible websites, including technical analysis, evidence collection, infrastructure analysis, and security documentation.

TECHNICAL SKILLS

Programming & Scripting: Python (Exploit development & Automation), Dart/Flutter, Bash Scripting, n8n.

Web Technologies: RESTful APIs, GraphQL, HTML/CSS, Django.

Security Tools: Burp Suite , Nmap, Metasploit, Netcat, Dirbuster/ffuf, Wireshark , curl, dig , httpx

Web & API Security: OWASP Top 10, SSRF, SQLi, XSS, CSRF, Path Traversal, Access Control Flaws.

Operating Systems: Linux (Fedora/Debian) , Windows.

CERTIFICATIONS & TRAINING

Junior Penetration Tester (JPT) | TryHackMe

Hands-on certification focused on the core technical skills required for security assessments.

Key Skills: Web Application Hacking (Burp Suite), Network Security, Privilege Escalation (Linux/Windows), and Vulnerability Research.

Proficient in using industry-standard tools like Metasploit for exploitation and reconnaissance.

Linux Privilege Escalation for Beginners — TCM Security

Hands-on training on identifying Linux system misconfigurations and exploiting vulnerabilities to achieve root privileges.

Education

Aleppo University

B.Sc. in Computer Science

Graduated: August 2026

Languages

Arabic: Native Speaker

English : Fluent / Professional Working Proficiency

German: B1, currently preparing for B2
